Dear Sirs,

Before opening your Flume Ride for the 2000 season, we recommend a visual inspection on the welds of the structure as well as an inspection of all your bolts, in particular attention the anti-roll back system and the safe operation and condition of the conveyors. Please note that we are at your entire disposal to send you some repair program, original spare parts recommended in your maintenance book or if you need our assistance.

For next winter inclusive of the visual 2000/2001 and every winter after, we state you are required to have NDT by an independent office on this ride. NDT attention to be given on the following areas:

- anti roll back pins
- guide wheels pins
- running wheels axle shafts
- sample tests anti-roll back anchor welds on both elevators
- sample tests the welds on the structure, mainly on highest stress areas (I.E the bottom of the drops, also the highest stations.....etc...)

Sincerely Yours
